Tranzyme Pharma Completes US\$32 Million Financing

RESEARCH TRIANGLE PARK, N.C. and SHERBROOKE, Québec (May 13, 2005) – Tranzyme Pharma, a leading biopharmaceutical company developing novel mechanism-based therapeutics for the treatment of gastrointestinal (GI) disorders, announced today that it has completed an oversubscribed round of private financing, raising a total of \$32 million. The financing was led by H.I.G. Ventures, Thomas, McNerney & Partners and Quaker BioVentures. Additional participants in the round included existing investors, Business Development Bank of Canada (BDC Venture Capital), Desjardins Venture Capital, Pacific Rim Ventures and The Solidarity Fund (FTQ). As part of this financing, \$6 million in previously issued notes have been converted into equity shares.

“This financing brings together an international group of investors committed to advancing the Company’s therapeutics through the clinic,” said David J. Drutz, M.D., Chairman of Tranzyme Pharma and General Partner, Pacific Rim Ventures. “The Company has made outstanding progress in the last twelve months and has met or exceeded all of its development milestones.”

“We are very pleased that Tranzyme’s progress has allowed us to attract an outstanding group of investors,” stated Vipin K. Garg, Ph.D., President and Chief Executive Officer of Tranzyme Pharma. “The funds raised in this round of financing will allow us to accelerate the clinical development of our lead compounds and focus on additional discovery and pre-clinical development efforts to expand our pipeline.”

The Company’s lead product, TZP-101, is expected to enter clinical trials for the treatment of post-operative ileus before the end of 2005. The Company also has novel small molecule compounds in its preclinical pipeline for diabetic gastroparesis, irritable bowel syndrome and functional dyspepsia. Unlike most current therapeutic approaches to GI disorders that address only symptomatic relief, Tranzyme Pharma’s “mechanism-based” therapies directly target the site of pathophysiological disturbance and correct the underlying condition.

Upon the close of the financing, three new members have joined the Tranzyme Pharma board of directors: Aaron Davidson, managing director of H.I.G. Ventures, Alex Zisson, venture partner at Thomas McNerney & Partners, and Brenda Gavin, managing partner of Quaker BioVentures.

“Tranzyme’s ability to discover, optimize and develop first-in-class drugs combined with their experienced management team makes this an attractive investment opportunity,” stated Aaron Davidson, managing director H.I.G. Ventures. “This Company is poised to achieve tremendous success and H.I.G. Ventures is excited to be involved.”

About H.I.G. Ventures
